Exercises

A. 1. b   2. c   3. a   4. a   5. b

B. 1. oblique   2. Shorthand   3. weight   4. Repeat   5. direction

C. 1. False   2. True   3. False   4. True   5. False

D. 1. d   2. e   3. a   4. c   5. b

E. 1. CSS is cascading style sheet that helps to make HTML document more stylish and presentable.

     2. **Word Spacing:** Used to add or subtract spaces between the words of a sentence.

     Letter Spacing: Used to add or subtract spaces between the letters that make up a word.

     3. Background image position is a CSS property. Background properties help to set the background image and its position of HTML element.

     4. Text indent is used to indent the text of a paragraph.

     5. Syntax of CSS style rule:

Selector	Declaration
h1	{Color:blue; font-size: 12px;}

F. 1. When CSS is written using style attribute, it is called "inline style". Inline style looks and operates much like CSS, with a few differences. Inline styles directly affect the tag they are written in, without the use of selectors. The style attribute is just like any other HTML attribute. It goes inside the element's beginning tag, right after the tag name. The attribute starts with style, followed by the sign '=' then finally uses double quotes, "", which contains the value of the attribute. For example, the p tag with the style attribute P { color: blue; Font size: 46px; }

     2. CSS text property helps in styling text. We can change color, alignment and can add decoration properties to the text. Some of the text properties of element are as follows:

e space around an HTML...

or setting all the margins at o
bottom margin).

margin).

margin).

ght margin).
